OLUWAFISAYOMI ADEKOYA

Penetration Tester | Security Engineer | Purple Team

Offensive security and detection engineering: full attack chains, CVSS-scored reports, and SIEM detection rules → github.com/sekere01

Lagos, Nigeria | oluwafisayomiadekoya1038@gmail.com | linkedin.com/in/oluwafisayomi-adekoya | github.com/sekere01

PROFESSIONAL SUMMARY

Purple team security engineer and EC-Council Certified Penetration Testing Professional (CPENT) with proof-of-work across live production infrastructure, not just CTFs. Now leading core security engineering work in a production environment, spanning secure delivery pipelines, centralized monitoring and detection, and infrastructure hardening. Demonstrated full attack-chain execution across web applications, Active Directory, and enterprise networks, including a black-box engagement against a live fintech target. Works across the offense/defense boundary as a purple teamer: exploitation and CVSS-scored reporting on one side, SIEM tuning and detection engineering on the other, with attacker techniques mapped to MITRE ATT&CK and fed back into detection.

CORE TECHNICAL SKILLS

Web App Testing	Burp Suite, SQL Injection (Manual & Automated), IDOR, RCE, Command Injection, Authentication Bypass, OWASP Top 10
Infrastructure & Cloud	Server & cloud hardening, CI/CD pipeline security (GitHub Actions, SAST/SCA/DAST gating with Semgrep, Trivy, Gitleaks, OWASP ZAP), SBOM & CVE tracking, container security (Docker), Wazuh-based monitoring & detection
Network & Infra	Nmap, Netcat, Gobuster, Hydra, SMB Enumeration, Aircrack-ng, Service Exploitation, VPS Admin
Active Directory	AS-REP Roasting, Kerberoasting, Pass-the-Hash, BloodHound Analysis, Lateral Movement, NTDS.dit Extraction
Exploitation	Metasploit, SQLMap, Custom Payload Testing, Privilege Escalation (Linux & Windows), CVSS v3.1
Detection & SIEM	Wazuh, Splunk, Sophos Central, detection rule design, false positive/negative tuning
Scripting	Python (exploit automation, tooling), Bash (recon pipelines), SQL (injection & enumeration)
Concepts	Purple Teaming, MITRE ATT&CK, Cyber Kill Chain, OWASP Top 10, NIST CSF, Post-Exploitation, Threat Modeling

WORK EXPERIENCE

Security Engineer | Handi Digital Solutions LTD, Hybrid *Jul 2026 – Present*

- Designing and building the company's **CI/CD pipeline from the ground up**, embedding DevSecOps practices directly into the deployment process.
- Building the **monitoring and detection function**, consolidating server, cloud, and application signals into a single unified dashboard for centralized visibility and alerting.
- Hardening the full infrastructure stack, including servers and the cloud environment, to reduce attack surface across production systems.
- Contributing to the organization's internal security testing and control-validation efforts, helping surface and remediate exploitable weaknesses across the infrastructure.

Ethical Hacking Track | The Root Access Network (T.R.A.N), Remote *May 2026 – Sep 2026*

- Completed a structured, real-world consulting-style penetration testing curriculum. Reached **Advanced Stage 8** of the UBI Ethical Hacking Track (cohort of 2,828 narrowed to 22); 84% average across nine assessed stages; produced technical finding reports and executive and board briefings across earlier stages.
- Built a reliable, non-Metasploit **foothold-to-root exploit chain** for an offline VM built from supplied source; patched both root causes and validated remediation through negative retesting from clean snapshots.

Cybersecurity Intern, Security Team | Expadox Lab, Remote *May 2026 – Jul 2026*

- Served on the Security team for OpsShield, a live capstone product with real Paystack billing integration; responsible for STRIDE threat modeling, application security scanning (Semgrep, Trivy, Gitleaks, OWASP ZAP), SBOM/CVE tracking, and Wazuh SIEM deployment with custom detection rules.

Security & IT Operations Lead | Levi's Acre Farms and Foods, Lagos, Nigeria *Mar 2023 – Feb 2026*

- Identified and mitigated web application vulnerabilities including SQL injection and XSS through SSL/TLS configuration, automated patching, and input validation controls; platform serves 40–50 active users processing NGN 700K–1.2M monthly revenue.
- Implemented IAM governance enforcing Principle of Least Privilege across cloud operational systems supporting 4–7 cross-functional teams.

IT Support Specialist | Grola Tech Limited, Lagos, Nigeria *Mar 2020 – Jun 2021*

- Managed endpoint security across 30+ Windows and Linux systems; deployed EDR/antivirus solutions and executed system hardening protocols. Maintained 99.9% network uptime through DNS and TCP/IP troubleshooting.

IT Infrastructure Intern | Tenece Professional Services, Lagos, Nigeria *Aug 2017 – Aug 2018*

- Supported enterprise server maintenance and client-side infrastructure security across multiple client environments.

FEATURED PROJECTS: PROOF OF WORK

Black-Box Penetration Test: Reyts Fintech (Live Target, Hackathon 2026) *Mar 2026*

- Conducted full-scope black-box penetration test against a **live fintech target** (reyts.online; authorised, in-scope under Amdari hackathon rules of engagement) with no prior access; performed recon, attack surface mapping, and exploitation across DNS, email infrastructure, and Active Directory.
- Identified **7 vulnerabilities (2 Critical, 3 High, 1 Medium, 1 Low)** including missing SPF/DMARC, absent MFA, and exploitable AD service accounts; delivered a CVSS v3.1-scored report with a prioritized remediation roadmap.
  github.com/sekere01/Black-Box_Pentest_Reyts_Fintech

Active Directory Attack Lab: Full Domain Compromise *2026*

- Simulated an internal attacker against a fully configured Windows Server 2025 AD environment; executed AS-REP Roasting, Pass-the-Hash lateral movement, and BloodHound privilege path analysis.
- Achieved **domain-level access** via NTDS.dit extraction using Impacket secretsdump; documented the full attack chain with CVSS v3.1-scored findings and a remediation roadmap.
  github.com/sekere01/active-directory-attack-lab

KYC Fraud & Threat Intelligence Analysis: Reyts Fintech *Mar 2026*

- Analyzed KYC anomaly transaction logs to identify fraud patterns, cluster suspicious IPs, and detect device fingerprint reuse across multiple accounts.
- Matched attacker infrastructure against Tor exit node IoC feeds; mapped identified TTPs to MITRE ATT&CK and delivered a structured threat intelligence report.
  github.com/sekere01/KYC_FRAUD_REPORT

Web Application Security Assessments *2026*

- Exploited SQL Injection via a medium-level input-filter bypass (lab) using manual techniques and SQLMap to extract database schema and sensitive user credentials from a DVWA medium-security environment.
- Identified and exploited Broken Access Control (IDOR, OWASP A01:2021) in a simulated internal portal using Burp Suite to access unauthorized user data; delivered remediation guidance.
  github.com/sekere01/DVWA-Medium-Level-SQL-Injection-Assessment · github.com/sekere01/internal-portal-access-control-audit

TryHackMe Practical Labs: 30-Day Streak | 48 Rooms Completed *2026*

- Completed 48 rooms across offensive and defensive tracks: SSRF, PHP backdoor exploitation, XOR cryptanalysis, SQL injection, SUID/sudo privilege escalation, and multi-stage CTF chains (Olympus, Overpass, Mr. Robot, Lookup).

Enterprise Security Operations Lab *2025*

- Deployed Splunk SIEM with Sophos Central, tuning detection rules to cut false positives by approximately **65%**; designed a 4-phase PKI environment and validated TLS 1.3 forward secrecy in Wireshark.
  github.com/sekere01/splunk-siem-sophos-integration · github.com/sekere01/enterprise-pki-tls-ssh-security-lab

CERTIFICATIONS & TRAINING

Certified Penetration Testing Professional (CPENT) v2 | EC-Council | Issued Sep 2026

OSCP+ (planned) | OffSec

Google Professional Certificate in Cybersecurity (SQL, Linux, Python) | Google

Palo Alto Networks PSE: Endpoint, Platform & Foundation | Palo Alto Networks

Diploma in Cybersecurity (GPA 3.80/4.0) | AltSchool Africa

Introduction to Cybersecurity (Cisco) · ManageEngine UEM Technical Training · Certified Cybersecurity Educator Professional (CCEP)

Industry Simulations (Forage): Datacom (Cyber Ops) · AIG (Incident Response) · Mastercard (Phishing Analysis) · Deloitte Australia (Risk Advisory) · Telstra (Triage) · Tata Group (Analyst)

EDUCATION

Higher National Diploma (HND), Computer Science | Yaba College of Technology *2019*

National Diploma (ND), Computer Science | Yaba College of Technology *2017*
